

How to tackle a respiratory virus?

Alt-text Figure 1 - Droplet transmission through face masks. Each data point represents the relative droplet count (RDC) compared with no mask. The lower the RDC, the more droplets are blocked by the mask and increased the filtration efficiency

A dot-plot showing the protection of different face coverings from highest to lowest protection: fitted N95, surgical, cotton+polypropylene+cotton, 2-layer polypropylene, swath 2-layer cotton pleated, valved N95, 2-layer cotton Olson style, one layer cotton, knitted, bandana, none, neck gaiter
