

Identification of recombinants

Alt-text Figure 40 - Schematic illustration of SARS-CoV-2 recombination breaking points

Schematic illustration of SARS-CoV-2 recombination breaking points. An orange bar represents the SARS-CoV-2 genome. Below there are bars that represent the location of the genes that encompass the SARS-CoV-2 genome in red: ORF1a and ORF1b; yellow: Spike, M and N; light orange 3a, 6, 7ab and 8. Below them are 3 other bars: green, purple and light purple representing the genomes of Delta, Omicron BA.1 and Omicron BA.2 lineages respectively. The 3 bars in the bottom represent XD: recombination of Delta and BA.1; XE: recombination of BA.1 and BA.2; and XF: recombination of Delta and BA.1
